Applicant's amendment dated August 4, 2005, has been fully considered.

Applicant argued that elements 27, 28, in Kersten do not prevent the piston from going back to the original position because "The bolt is then fired and the gas in the annular space 34 compressed". The Examiner strongly disagrees. That paragraph simply mean that the gas in space 34 is used to overcome the locking force of locking elements 27, 28, to send the piston back to the original position. Before the gas in space 34 is activated, the piston was locked by elements 27, 28, to prevent it from going back to the original position, and that meets the claimed language. The claim does not recite a permanent locking position.

For the reasons set forth above, the rejection has been made final for claim 21 and its dependent claims.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 21-22, are rejected under 35 U.S.C. 102(b) as being anticipated by US 6085958 (Kersten).

Kersten discloses a gas expansion chamber in the cylinder 26 in front of piston head 22, in communication with the explosion chamber as claimed in claim 19 and its

Art Unit: 3748

dependent claims. Kersten also discloses a locking means 27, 28, for preventing the piston from going back to the original position.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 23-27 are rejected under 35 U.S.C. § 103(a) as being unpatentable over U.S. 6085958 (Kersten). Kersten discloses all the claimed subject matter as set forth above in the rejection of claim 19, but does not disclose the locking means having the protrusions with angles as claimed. However, it would have been obvious at the time the invention was made to a person having ordinary skill in the art to select different types of locking means in Kersten for the purpose of achieving a more stable locked position.

Claims 1-18 are allowed.

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any

Art Unit: 3748

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
